

Vibro-SC

ANTI-VIBRATION WALL CONNECTION

Description

Anti-vibration wall connection **Vibro-SC** is used in order to add structural integrity of long and tall gypsum board walls, which are mounted on antivibration pads or based on floating floor. It prevents any direct connection between the double walls, and increases their stiffness. Additionally it prevents wall backling during earthquakes. It is useful when a secondary wall is applied for improved sound insulation where rigid connections will cause an unwanted sound bridge.

Vibro-SC consists of a metal sheet, suitable modulated. A special antivibration elastic support, **Vibro-Strip**, is placed internally to absorb positive and negative axial forces. The pass-through screw does not come in contact with the metal frame, so that no sound bridge is created.

Vibro- SC Selection Table

TYPE	DIMENSIONS A x B x C x D (mm)	MAX AXIAL RESTRAINT (kp*)
Vibro-SC.1	25 - 8 - 40 - 70	30
Vibro-SC.2	50 - 8 - 40 - 70	60

*1 kp = 10 N
